Weave an Easy Fish

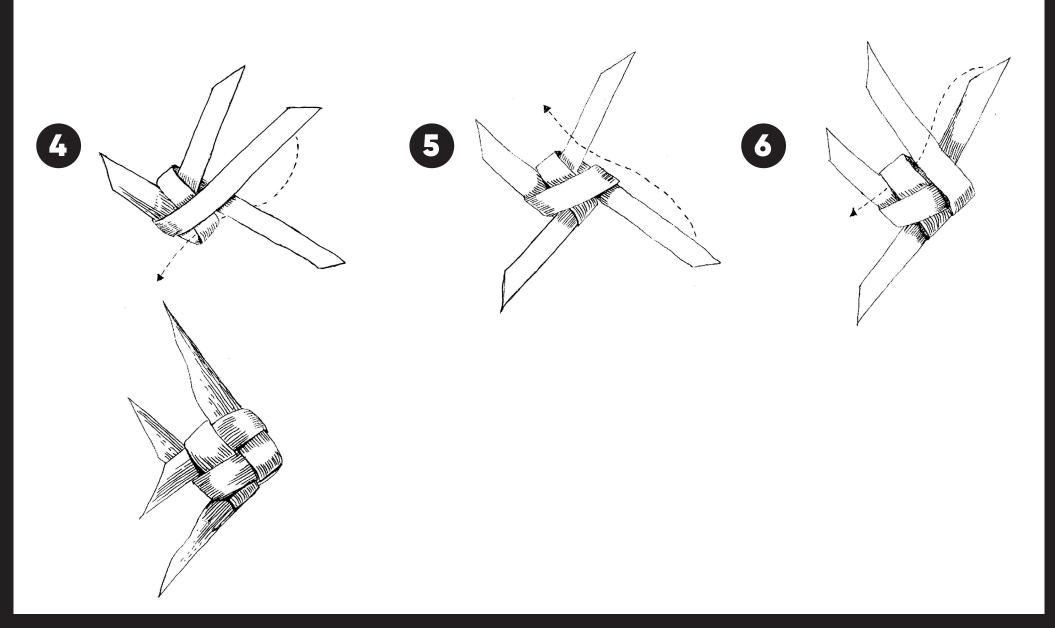

- 1. Select two even strips of paper. Trim each edge into a diagonal.
- 2. Form one of them into an S shape
- 3. Put the second piece in place

- 4. Bend the straight piece up, around and back through the hole. Both strands now follow an S shape and are locked together.
- 5. The right strand is brought across
- 6. The top right strand is brought down across the previous strand and through the hole.
 This completes the basic structure of the fish. Trim the tail and fins as desired!
